                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         mouse cDNAs are modified using PCR primers (AAQ)9895-98) and then subcloned into mammalian cell expression vectors containing human kappa or gamma-1 constant regions. In the humanized heavy chain, amino acids H27, H28, H29, H30, H44 nd H71 in the human HC VR framework are replaced by the amino acid present in the equivalent chimeric antibodies are transfected into COS cells. The humanized antibodies are transfected into COS cells. The humanized endothelial cell and to treat inflammatory diseases such as multiple cerebral traumas, meningitis or encephalitis. The antibodies can be used for detecting VLA-4, for affinity purification or for generating anti-idiotype antibodies.
                                                                                                                                                     AAW22428;
                                                                                                                                                                                 AAW22428 standard; Protein; 142 AA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The sequence represents the human reshaped antibody 21.6 heavy chain variable region against leukocyte adhesion molecule VLA-4. Cloned cDNA sequences of mouse 21.6 VH (AAQ99892) and VL (AAQ99889) regions are linked to human constant regions in the construction of a humanized antibody against VLA-4. The 5 and 3 ends of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence

         mutagenesis of appropriate mouse and human DNA sequences. The mutagenesis of appropriate mouse and human DNA sequences. The the sequences of appropriate mouse 21.6 VL (see AAW2242) can be used humanised 21.6 that is useful in the manufacture of a medicament for treating asthma, atherosclerosis, AIDS, dementia, diabetes, inflammatory bowel disease, rheumatoid arthritis, transplant rejection, graft versus host disease, tumour metastasis, nephritis, atopic dermatitis, psoriasis, myocardial ischaemia, and acute leukocyte mediated lung injury. The humanised antibody has a half-life in the human circulation essentially equivalent to that of naturally occurring human antibodies.
                                                                                                                                                      This polypeptide, designated Ha, comprises the heavy chain variable region (VH) of a humanised alpha-4 integrin antibody 21.6 (see also AAW22413). It is composed of complementarity determining regions from the VH region (see AAW22410) of mouse alpha-4 integrin monoclonal antibody 21.6 and a modified human 21/28/CL framework. It can be expressed in mammalian host cells following PCR amplification and expressed in mammalian host cells following PCR amplification.
                                                                                                                                                                                                                                                                                                     Uses of humanised alpha-4 integrin antibody - for treatment of

The antibody may also be used in the affinity purification of alpha-4 integrin generating idiotypic antibodies. The humanised antibody has a half-life in the human circulation essentially equivalent to that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This polypeptide, designated Ha, comprises the heavy chain variable region (VH) of a humanised alpha-4 integrin antibody 21.6. It is composed of complementarity determining regions (CDRs) from the VH region (see AAW22410) of mouse alpha-4 integrin monoclonal antibody 21.6 and a modified human 21/28/CL framework. It can be expressed in mammalian host cells following PCR amplification and mutagenesis of appropriate fragments of mouse and human DNA sequences. The humanised 21.6 VH and a humanised 21.6 VL (see AAW22412) can be used to produce a claimed humanised 21.6 antibody that is useful in the

The 5' and 3' ends of the mouse cDNAs are mammalian cell expression vectors containing human kappa or gamma-1 constant regions. In the humanized light chain, amino acids 145, 149, acid present in the equivalent position of the mouse 21.6 Ig light chain. Plasmids encoding the chimeric antibodies are transfected into cost. The humanized antibodies can be used to inhibit adhesion of a smultiple sclerosis. They can also be used in the treatment of stroke, used for detecting VLA-4, for affinity purification or for generating humanized antibodies.
Sequence
                                                                                                                                                                                             The sequence represents the mouse anti-VLA-4 antibody 21.6 heavy chain variable region (without signal sequence). Cloned cDNA CDR sequences of mouse 21.6 variable light and variable heavy regions are linked to human constant framework regions of the REI antibody for the light chain and

CC antibody against VIA-4. The 5' and 3' ends of the mouse cDNAs are commodified using PCR primers (See AAQ9995-98) and then subcloned into CC mammalian cell expression vectors containing human kappa or gamma-1 C constant regions. In the humanized heavy chain, amino acids H27, CC constant regions. In the humanized heavy chain, amino acids H27, CC constant regions. In the humanized heavy chain, amino acids H27, CC to the amino acid present in the equivalent position of the mouse C21. If y H chain. Plasmids encoding the chimteric antibodies are C21. If y H chain. Plasmids encoding the chimteric antibodies can be used to inhibit adhesion of a leukocyte to an endothelial cell and CC to treat inflammatory diseases such as multiple sclerosis. They C can also be used in the treatment of stroke, cerebral traumas, C meningitis or encephalitis. The antibodies can also be used for affinity purification or for generating cantilogicus antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9

This polypeptide comprises the heavy chain variable region (VH) of C mouse anti-alpha-4 integrin monoclonal antibody 21.6. The CC complementarity determining regions (CDRs) of the 21.6 VH can be CC incorporated into a human 21/28/CL framework to produce a claimed CC antibody that is used in the manufacture of a medicament for CC dementia, diabetes, inflammatory bowel disease, rheumatoid CC arthritis, transplant rejection, graft versus host disease, tumour CC ischaemia, and acute leukocyte mediated lung injury. The antibody CC may also be used in the affinity purification of alpha-4 integrin CC generating idiotypic antibodies. The humanised antibodies of the convertion have a half-life in the human circulation essentially convircing human antibodies of the convertion have a half-life in the human circulation essentially

                                                                                                                                                                                                                                                                                                                           and a cloning site for insertion of a second nucleic acid sequence encoding a polypeptide to be fused with streptavidin, interposed between the promoter and the first nucleic acid sequence. Alternatively, the vector construct comprises a first nucleic acid, operatively linked to a promoter, encoding a polypeptide to be fused with streptavidin, and a cloning site for insertion of a second nucleic acid encoding at least 129 amino acids of streptavidin or its functional variant. The fusion proteins are useful for targeting tumour cells, particularly tumour cells associated with cancer, e.g. adenocarcinomas or hematological malignancies. The vector construct is useful for expressing of streptavidin fusion proteins. In particular, these are useful as tools for medical diagnostics and therapeutic purposes, e.g. for detecting the presence or absence of, or treating, a target site within a mammalian host
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence encodes a fusion of the single chain antibody huNR-LU-10 and streptavidin. The antibody binds the antigen EGP40 or EPCAM. The fusion protein is expressed using vectors of the invention. The specification describes vector constructs for expressing streptavidin fusion proteins. The vector comprises a first nucleic acid encoding streptavidin or its functional variant operatively linked to a promoter,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A fusion of single chain antibody/streptavidin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New vector constructs for expressing genomic streptavidin fusion proteins which are useful for targeting tumour cells associated cancer, e.g. adenocarcinomas – \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   14-DEC-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Synthetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Streptavidin;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                07-JUN-1999;

cultured, and the expression prods. of the heavy and light chain DNA mols. sepd. and connected with a peptide linker to produce a single stranded Fv region. The reshaped Fv region has low human antigenicity, and is therefore expected to be useful as an agent for the diagnosis and treatment of cerebral tumours,
                                                                                                                                                                                                               The present sequence is a fragment of the chimaeric human/murine monoclonal antibody (MAb) ONS-M21. The MAb was prepd. by combining light and heavy variable region DNA, from a murine anti-human myeloblastoma cell MAb, with human light and heavy constant region sequences, respectively to produce chimaeric beauty constant region sequences, respectively to produce chimaeric
                                                                                                                                                               human/murine light and heavy chain DNA mols. A recombinant vector for the expression of the heavy and light chain DNA mols. was prepd., and used to transform a host cell. The host cell was then
                                                                                                                                                                                                                                                                                                                                                                Reshaped anti-human myeloblastoma cell human antibody - has low human antigenicity, and is therefore useful for diagnosis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Chimaeric human/murine MAb ONS-M21 fragment HEF-RVL-M21-g(gamma)1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Best Local Similarity
                                     AAQ94548 is the plasmid pSCFVT7-hM21, which encodes AAR76682 the human antibody ONS-M21 FV fragment. The plasmid was used in the construction of an expression vector, contg. cDNA encoding a human/murine chimeric antibody, reactive with human medulloblastoma (a brain tumour) cells. The chimeric antibody can be

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Peptide
The present sequence is a scFv fragment from the chimaeric human/murine monoclonal antibody (MAb) ONS-M21. The MAb was prepd. by combining light and heavy variable region DNA, from a murine anti-human myeloblastoma cell MAb, with human light and heavy constant region sequences, respectively to produce chimaeric human/murine light and heavy chain DNA mols. A recombinant vector for the expression of the heavy and light chain DNA mols. was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           JP08169900-A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   137 vss 139
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     121 VSS 123
                                                                                                                                                                                                                                                           Reshaped anti-human myeloblastoma cell human antibody - has low human antigenicity, and is therefore useful for diagnosis and treatment of cerebral tumours, e.g. myeloblastoma

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       prepd., and used to transform a host cell. The host cell was then cultured, and the expression prods. of the heavy and light chain DNA mols. sepd. and connected with a peptide linker to produce a single stranded Fv region. The reshaped Fv region has low human antigenicity, and is therefore expected to be useful as an agent for the diagnosis and treatment of cerebral tumours,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         e.g. myeloblastoma.
The sequence encodes the mouse antibody 21.6 heavy chain variable region, HC, directed against leukocyte adhesion molecule VLA-4. Cloned region like the constant regions in the construction of a humanized antibody against VLA-4. The 5' and 3' ends of the mouse cDNAs are modified using PCR primers (See AAQ99895-98) and then subcloned into mammalian cell expression vectors containing human kappa or gamma-1 constant regions. In the humanized light chain, amino acids L45, L58 and L69 in the human kappa LC VR framework are replaced by the amino acid present in the equivalent position of the mouse by the amino acid present in the equivalent position of the mouse
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Humanized antibody; leukocyte adhesion molecule; VLA-4; therapeutic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Humanized VLA-4 antibody 21.6 heavy chain variable region, Hc.

Plasmids encoding the chimeric antibodies are transfected into COS cells. The humanized antibodies can be used for inhibiting adhesion of a leukocyte to an endothelial cell and for treating inflammatory diseases such as multiple sclerosis. The meningitis or encephalitis. The antibodies can also be used for the treatment of stroke, cerebral traumas, meningitis or encephalitis. The antibodies can also be used for detecting VLA-4, for affinity purification or for generating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence

                                                                                                                                                                                                                                                                         This polypeptide, designated HC, comprises the heavy chain variable CC cregion (VH) of a humanised alpha-4 integrin antibody 21.6. It is CC composed of complementarity determining regions (CDRs) from the VH CC region (see AAW22410) of mouse alpha-4 integrin monoclonal antibody C2.6 and a modified human 21/28/CL framework. It contains an antibody CC additional amino acid substitution (Tyr102Phe) in comparison to CC claimed humanised 21.6 VH version Ha (see AAW22412). Humanised CC 21.6 VH and VL regions are used to produce claimed humanised 21.6 CC antibodies useful in the manufacture of a medicament for treating CC asthma, atherosclerosis, AIDS, dementia, diabetes, inflammatory CC bowel disease, thmour metastasis, nephritis, atopic CC dermatitis, psoriasis, myocardial ischaemia, and acute leukocyte CC mediated lung injury. The humanised antibodies have a half-life CC in the human circulation essentially equivalent to that of CC nafirally occurring human antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches 102;

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                        Score

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
